

Pitch

Time Allocation: ~10 Minutes

Tone: Personal, Passionate, confident (Do not mention bugs or failures!)

1. The Hook (30 Seconds)

(Start strong. Use the dramatic stat from your notes.)

"Did you know that **20% of all human learning is social**? We learn 70% by doing, 10% by reading, but that crucial 20%—learning from peers—is completely missing from modern education software.

Or, to put it more bluntly: **Delayed feedback kills learning.**"

2. The Story & Emotion (1 Minute)

(This is the personal connection requested in your notes. Be vulnerable here.)

"I want to take you back to my first year of university. I was sitting in my dorm room, staring at an assignment I didn't understand.

I was too intimidated to email the professor—they seemed so busy and 'up there.' I didn't really know my colleagues yet; I felt isolated. I desperately needed someone to look at my work, not to grade it, but just to say, 'Hey, you missed a spot here.'

I didn't have that. And looking at the market today, millions of students still don't. They have GitHub, which is scary for beginners. They have StackOverflow, which can be toxic. They have no safe space to fail and learn together."

3. The Problem (1 Minute)

(Define the "Feedback Bottleneck" clearly.)

"This isolation creates what we call the **Feedback Bottleneck.**"

- **For Teachers:** They are burnt out. A single teacher cannot give detailed, line-by-line feedback to 150 students every week. It is physically impossible.
- **For Students:** Feedback arrives too late—usually *after* the grade is final. That's an autopsy, not a lesson.

- **For Self-Learners:** They are stuck in tutorials with no human interaction.

4. The Solution (2 Minutes)

(Use the Template from your notes here verbatim.)

"So, what did we build?

For **educators and lifelong learners**, our app solves the '**Feedback Bottleneck**'—where feedback is either too slow (from teachers) or too toxic (from public forums)—by creating **Hubs for granular, rubric-based peer reviews**.

Unlike **GitHub or standard LMS tools**, we turn the review process into an **active learning strategy** that benefits the **giver** as much as the **receiver**."

5. The Demo / "What We Built" (4 Minutes - 70% of Focus)

(This is the "70% what we have" section. Show, don't just tell. Walk them through the flow.)

"Let me show you how **PeerPoint** works right now.

1. **The Hub:** A student joins a 'Hub'— a safe community. No trolls, just peers.
2. **The Upload:** They upload their draft.
3. **The Granular Review (The Magic):** This is our key differentiator. A peer doesn't just leave a generic comment. They **pinpoint** specific lines of the file.

Note: This encourages the 'Giver Effect'—by reviewing others, students master the material themselves."

6. The Market & Validation (1 Minute)

(The "Validation call the friends" section from your notes.)

"We didn't just guess this was a problem. We reached out to our network.

- We asked fellow students: '*Would you use a private space to check homework before submitting?*' The answer was an overwhelming yes.
- We looked at the market: The **Coding Bootcamp market** alone is worth **\$1.35 Billion**. These are high-churn environments desperate for peer

support systems."

7. The Future & Business Model (1.5 Minutes - 30% of Focus)

(The "30% what we will do next" section.)

"We have built the core engine. Here is where we go next:

Monetization Strategy:

- **B2C (Freemium):** Free for students to join up to **3 Hubs**. This drives viral adoption. If they want more, they pay a small subscription.
- **B2B (Institutional):** The real scale. We sell licenses to Universities and Bootcamps. They get **Unlimited Private Hubs**

Roadmap:

- **AI Moderation:** We are integrating AI to automatically flag toxic or unhelpful comments, ensuring our Hubs remain a psychological safe space.
- **The 'Visibility Loop':** We are gamifying the feedback process. Students earn **Experience Points (XP)** for leaving high-quality reviews. Higher XP makes *their* own posts more visible in the Hub, incentivizing them to give help in order to get help."

8. Conclusion

(End on a high note.)

"We move away from the isolated "submit and wait" approach and create an active community where students learn by giving and receiving feedback.

Thank you."
